Okay I'm sending the CG statements and photos- they are allowing us to continue our voyage but will most likely need to board the vessel upon arrival to NYH they will survey the bridge tomorrow for any damage. Please proceed as planned. I will notify sector NY and TVIB.

Please give me a call about the incident report in regard to the steering. I can update with steering veered off course?

I'll call you very shortly but his interview statement to CG said it never went hard over and it was midship the entire time.

This is the error code it's sending on the upper Wheelhouse when trying to go into Auto pilot mode. Lower is working fine. Alex is up there troubleshooting it. No luck so far. I'm hand steering for now in main while he's working on it.

I had Alex trouble shoot what he could on the Steering and feel that I think it would be best to have Todd Ayers or his Technician come and take a look at it. I just want to make sure that it's 100 percent due to what happened on the 15th in Norfolk. I think it would be the best thing to do as we have gone as far as we can here, and don't want to get too much more into it with out a Technician it Could be a wiring problem or if it's something with the components of it? I don't know. Gordon my relief knows about it as I informed home of it when he called me. Thanks CM

Tom will have Ayers work it and no autopilot inside of sea buoys.

Tom- Let us know

Shut off the autopilot, shut off the power supply to the unit, and it should find itself… as per Todd
